DETAILED ACTION

Specification

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 2. Claims 1-8 and 23 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

It claimed "a first demultiplexer for demultiplexing the first carrier from the fiber, a second demultiplexer for demultiplexing the second carrier from the fiber", which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention because it is unclear how the first demultiplexer and the second demultiplexer, demultiplex the first carrier and the second carrier from the fiber (i.e., in order to demultiplex the first carrier and the second carrier from the fiber, the close loop optical fiber must carry a wavelength division multiplexed signal).

Application/Control Number: 09/914,523

Art Unit: 2613

It further claimed "a first multiplexer for multiplexing the first carrier from the fiber". It is unclear what wavelength that the first multiplexer multiplex with the first carrier.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1, 7, 8 and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Oberg et al. U.S. Patent no. 6,915,075.

Regarding claims 1 and 23, Oberg discloses in figure 2, a method of a closed loop optical fiber for carrying information modulated on at least two optical carriers (e.g., information is modulated with working wavelength and spare wavelength), a first one of the carriers having a first wavelength (i.e., λ 1) and a second one of the carriers having a second wavelength (i.e., λ 2), at least two nodes (e.g., node 1) at a first one of which first information modulated on the first carrier (i.e., λ 1) and second information modulated on the second carrier (i.e., λ 2) is to be recovered and transmitted, the first node 1 comprising a first demultiplexer 15 for demultiplexing the first carrier (i.e., λ 1) from the fiber, a second demultiplexer (i.e., same as the first de-multiplexer) for demultiplexing

Art Unit: 2613

the second carrier $\lambda 2$ from the fiber, a first multiplexer 13 for multiplexing the first carrier $\lambda 1$ on the fiber, a second multiplexer (i.e., same as the first multiplexer) for multiplexing the second carrier $\lambda 2$ on the fiber, and apparatus for receiving and transmitting first and second information ($\lambda 1$, , $\lambda 2$) comprising a first receiver 9 for receiving and transmitting first and second information consisting essentially of a first receiver RN for demodulating first information and a first transmitter EN for modulating first information on the first carrier $\lambda 4$ before the first carrier $\lambda 1$ is placed on the fiber by the first multiplexer 13, a second receiver 9 for demodulating second information and a second transmitter (spare transponder 21) for modulating second information on the second carrier $\lambda 2$ before the second carrier is placed on the fiber by the second multiplexer 13, and a first and second switches 17, 19, wherein when the first carrier is not capable of transmitting the first information over the fiber, the first information is modulated on the second carrier for transmission over the fiber (col. 5, line 50 to col. 6, line 47).

Regarding claims 7 and 8, Oberg discloses the bidirectional WDM link comprises 3 or N WDM channels (col. 4, lines 32-37).

5. Claims 2-6 would be allowable if rewritten to overcome the 112 rejections above.

Response to Arguments

6. Applicant's arguments with respect to claims 1, 7, 8 and 23 have been considered but are moot in view of the new ground(s) of rejection.
